

P1808 Pilot-Operated Relief Valve or Backpressure Regulators

The P1808 pilot-operated relief valve or back pressure regulator is used in gas or liquid service to maintain pressure on oil and gas separators, and in pressure relief applications in gas distribution systems. The function of the P1808 is controlled by the type of pilot installed on the unit. A PL82 series pilot regulator is used in back pressure applications, and only bleeds when repositioning the main valve. A PL82B series regulator is used in pressure relief applications, and exhausts the entire time the inlet pressure is above the set pressure. This allows the unit to achieve wide-open flow more easily. The unit controls pressures from 3 to 125 PSIG (0.21 to 8.6 Bar), and the set pressure can be adjusted for individual requirements by the adjusting screw on the pilot.

Applications

- Gas or Liquid Service
- Gas Separators
- Distribution Relief Device

Features

- Compact Design
- Pilot Operated
- High Flow Capacity

Materials of Construction

Body, Bonnet, Diaphragm Case	
P1808 Body	Ductile Iron or WCB Steel
Diaphragm Plates and Diaphragm Casings	Zinc-plated steel
Diaphragm	Nitrile (NBR)
O-Rings	Nitrile (NBR)
Gaskets	Nylon
Backup Rings	Polytetrafluoroethylene (PTFE)
Spring	Zinc-plated Steel (Standard)
Valve Plug Guide	Stainless Steel
PL82 Series Pilot	
Body	Aluminum
Spring Case	Aluminum
Body Plug	Aluminum
Valve Plug	Nitrile (NBR)
Spring	Zinc-plated Steel
Diaphragm	Nitrile (NBR) or Fluorocarbon (FKM)
Spring Seat	Zinc-plated Steel
Stem Guide	Stainless Steel
Adjusting Screw	Zinc-plated Steel
O-Rings	Nitrile (NBR) or Fluorocarbon (FKM)
Closing Cap	Aluminum
Connector Cap	Stainless Steel
Mounting Parts	
Tubing	Stainless Steel
Fittings	Stainless Steel
Pipe Tees	Stainless Steel
Pipe Nipples	Stainless Steel
Options	
Upstream control line construction	
Pressure gauge (0 to 160 PSIG / 0 to 11.0 BAR / 0 to 1.1 MPa)	
P590 Series Pilot Supply Filter	
Approximate Weights	
Type 1808	22 pounds (10 kg)

P1808 Flow and Sizing Coefficients

Type	Flow Coefficients (Wide-Open)		C ₁	K _m	IEC Sizing Coefficients

-- Shaded areas indicate capacities with main valve wide-open.

1. Capacities based on 0 PSIG (0 BAR) outlet pressure. If outlet pressure is not 0 PSIG (0 BAR), shaded capacities may be recalculated using the wide-open C_g and the desired pressure drop.

125	8.6	258,000	6914							

1. Set pressure is defined as the pressure at which the pilot exhaust starts to bubble (discharge).

2. Crack pressure is the inlet pressure at which the main valve starts audible flow.

3. Inlet pressure buildup over the set pressure to achieve wide-open capacity.

4. Capacities with inlet piping equal to body size and without outlet piping.

P1808 Regulator Rebuild Kits

	Kit Includes	Part Number
P1808	Nitrile Diaphragm Assembly, Valve plug O-rings & backup O-rings, Casing/body gasket	971-180-800
